	Supabase Architecture Overview	

About this document: This is a formal handover document prepared by the web designer to provide the business owner with a comprehensive reference for all features of the Mayura Garden Services website and management platform. Each chapter covers a distinct area of the system with annotated screenshots, feature descriptions, and technical notes where relevant.

CHAPTER 1

Homepage

The public-facing marketing website — the primary touchpoint for prospective clients discovering Mayura Garden Services online.

Hero Section & Navigation

The homepage is the first impression visitors have of Mayura Garden Services. It is designed to immediately communicate professionalism, showcase the quality of garden transformations, and guide visitors towards requesting a quote.

#	Description
1	Main navigation bar with logo, language toggle (EN/), and quick-access links
2	Hero headline and value proposition — immediately communicates the brand offer
3	Primary call-to-action button directing visitors to the quote request form
4	Language toggle — switches the full page between English and Chinese

The navigation bar is persistent across all pages and provides quick access to the key sections. The language toggle (① ④) allows the full site to be viewed in either English or Simplified Chinese, serving the local Chinese-Australian community.

The services section presents each gardening service as a distinct card, giving potential clients a clear overview of what Mayura offers. Each card can be expanded to show more detail about that service.

#	Description
1	Service category card — click to expand details and pricing range
2	Service category card — Lawn Care & Maintenance
3	Service category card — Garden Design & Landscaping
4	Section sub-heading introducing the service offerings
	› Lawn mowing, edging and maintenance
	› Garden design and landscaping
	› Pruning, hedge trimming and clean-ups
	› Irrigation installation and maintenance
	› Planting, mulching and soil preparation
	› Seasonal tidy-ups and ongoing maintenance programs

The interactive before/after gallery is one of the most powerful trust-building elements on the homepage. Visitors can drag the reveal slider (③) left and right to compare the original garden state with the completed Mayura transformation.

#	Description
1	Before image — original garden state prior to Mayura works
2	After image — completed transformation result
3	Interactive drag-to-reveal slider — visitors drag left/right to compare before/after
4	Gallery section heading with project count indicator

The gallery images are sourced from the admin portal. New before/after project photos can be added at any time by the admin — they appear immediately on the public homepage. The gallery works on both desktop and mobile with native touch-drag support.

The quote request form is the primary lead-generation mechanism. Visitors complete their contact details, describe their garden needs, and can upload up to five photos of their garden. This data is stored securely in Supabase and immediately visible in the Admin Portal under Quote Requests.

Tap to add photos

📩 Request a Quote

#	Description
1	Client name and contact details fields
2	Service type selector and preferred date picker
3	Photo upload area — accepts up to 5 images (max 10 MB each); triggers AI garden analyser
4	Agent referral code field — links submission to a referral partner for commission tracking
5	Submit button — stores request in Supabase and sends transactional email notification

Behind the scenes: On submission, two Supabase edge functions are triggered automatically:

- ① **send-transactional-email** — sends a confirmation email to the client and an alert to the admin.
- ② **garden-value-analyzer** — uses AI to analyse the uploaded garden photos and generate a preliminary scope summary visible in the admin quote requests list.

Visitors can share the Mayura Garden Services website directly from the homepage via six social channels. Each button opens the relevant platform with the site URL and a pre-written message pre-populated.

#	Description
1	Facebook share button — opens pre-filled Facebook post with site URL and OG image
2	Twitter/X share button
3	WhatsApp share button — sends message link directly to WhatsApp
4	LinkedIn share button
5	Email share button — opens default email client with pre-filled subject and body
6	WeChat button — opens QR code modal for adding contact or sharing page in WeChat

The WeChat button (6) opens a modal with two QR codes — one to add Mayura's WeChat contact, and one to share the website URL within WeChat, making it easy to reach the Chinese-Australian community who primarily use WeChat for communication.

The language toggle switch in the top navigation allows visitors to view the entire public website in Simplified Chinese. All navigation items, headings, service descriptions, form labels and button text are translated.

#	Description
1	Navigation rendered in Simplified Chinese after toggling the language switch
2	Language toggle button — now showing "EN" to switch back to English
3	All hero text, service descriptions and form labels translated
4	Chinese language support built with a custom i18n context; covers the full public-facing UI

The translation is handled by a custom internationalisation (i18n) context built into the React application. To update or add translations, the translation strings are maintained in `/src/i18n/` — contact the web designer if new content needs to be added to both languages.

The screenshot below shows the complete homepage layout from top to bottom, giving an at-a-glance view of how the sections are sequenced to guide the visitor from awareness through to action.

► **Section 1:** Hero with headline, subheadline and primary CTA

► **Section 2:** Services cards overview

► **Section 3:** Before & After interactive gallery

► **Section 4:** Quote request form with photo upload

► **Section 5:** Social share buttons and WeChat QR

CHAPTER 2

Agent Login & Agent Portal

The referral partner portal — a dedicated workspace for approved agents to submit quote requests on behalf of clients, track their jobs, and monitor commission earnings.

Agent Login & Sign-Up

The agent portal is accessed at `/agent/login`. It is entirely separate from the admin portal, with its own authentication flow and access controls. The login page has two tabs: Login for existing agents and Sign Up for new registrations.

#	Description
1	Mayura Garden Services logo — links back to the public homepage
2	Login tab — existing agents sign in here with email and password
3	Sign Up tab — new agents register by providing name, agency, phone and creating a password
4	Email and password input fields
5	Sign In button — authenticates against Supabase and verifies agent approval status
6	Note: newly registered agents enter a pending state until approved by admin

#	Description
1	Agent / business name field
2	Agency or company name field
3	Phone number field for contact purposes
4	Email and password fields
5	Create Account button — submits registration and triggers pending-approval workflow

Important approval workflow: When a new agent registers via the Sign Up tab, their account is immediately placed in a *Pending* status. They cannot access any portal features until the admin reviews their registration in the Admin → Agents section and changes their status to *Approved*. The agent will see a pending message if they attempt to log in before approval.

The agent dashboard provides a real-time summary of the agent's activity — active requests, completed jobs and total commissions earned. It is the first screen an agent sees after logging in.

#	Description
1	Agent navigation header with portal branding and sign-out control
2	Active Requests counter — number of quote requests currently in progress
3	Completed Jobs counter — total jobs completed via this agent's referrals
4	Total Commissions earned — live total from Supabase referral records
5	Recent requests list — quick view of latest quote submissions with status badges
6	Bottom navigation bar (mobile) — Dashboard, Requests, Jobs, Gallery, Referrals

Quote Request Submission

Agents can submit new quote requests on behalf of prospective clients. The form is similar to the public quote form but pre-attaches the agent's unique referral code, ensuring they receive commission credit when the job is completed.

3	Business hours and response time information

CHAPTER 3

Admin Login & Admin Portal

The full business management platform — covering quotes, jobs, invoices, clients, calendar, materials, packages, agent management, and system settings.

The admin portal is accessed at `/admin/login`. Authentication uses Supabase email/password login. After successful sign-in, the system verifies the user has an `admin` role in the `user_roles` database table before granting access. Attempting to access any `/admin/*` URL without being logged in as admin will redirect to this page.

#	Description
1	Mayura Garden Services logo — links back to the public homepage
2	Admin portal heading — clearly identifies this as the staff-only login page
3	Email address input field
4	Password input with show/hide toggle
5	Sign In button — authenticates against Supabase and verifies admin role in <code>user_roles</code> table

Security note: Admin credentials should be kept confidential and never shared. Only authorised staff should have admin login details. The admin role is assigned directly in the Supabase database — contact the web designer to add or remove admin users.

Admin Dashboard

The dashboard is the admin's home screen, providing an at-a-glance summary of business performance. KPI cards show total quotes, active jobs, monthly revenue and new quote requests. A recent activity list surfaces the latest actions across the platform.

#	Description
1	Admin top navigation — logo, notification bell, sign-out
2	Sidebar navigation — links to all admin sections
3	KPI card — Total Quotes (all time)
4	KPI card — Active Jobs currently in progress
5	KPI card — Revenue this month from accepted quotes
6	KPI card — New Quote Requests awaiting review
7	Recent activity list — latest quotes, jobs and client actions
8	Notification bell — alerts for new quote requests and job updates

Quote Requests

Every quote request submitted via the public website or by an agent appears here. The AI garden analyser edge function automatically generates a scope summary from the uploaded photos, saving admin significant time in initial assessments.

#	Description
1	Page heading — incoming quote requests submitted via the public website form
2	Client name and contact details for each request
3	Service type and preferred date requested
4	AI garden analysis summary — auto-generated from uploaded photos via Supabase edge function
5	Status badge — New / Reviewed / Converted
6	Action buttons — View details, Convert to Job
7	Referral code column — identifies if a request came via an agent referral

Supabase Integration: Each new submission triggers the **garden-value-analyzer** edge function, which uses AI vision analysis on the uploaded garden photos to estimate scope and suggest service types. The result appears in the AI Analysis column (4).

The quote editor is the central tool for creating and sending client quotes. It supports line items for both materials and labour, automatic tax calculation, and one-click PDF generation. Quotes can be saved as drafts or sent directly to clients via email.

Save Quote

#	Description
1	Quote number and status badge (Draft / Sent / Accepted / Declined)
2	Client details section — name, email, phone, address
3	Service date and notes fields
4	Line items table — add materials and labour rows with quantity and unit price
5	Add Line Item button — inserts a new row with material lookup (Bunnings search integration)
6	Subtotal, tax and total calculations — auto-updated as items change
7	Save Draft button — persists quote without sending
8	Send to Client button — generates PDF and triggers transactional email
9	PDF Preview button — renders a jsPDF quote ready for download

The jobs list tracks every gardening job from creation through to completion. Jobs can be created manually or automatically generated when a quote is accepted by a client. Each job is linked to a client, a quote, and an invoice.

#	Description
1	Jobs list header with filter controls (status, date range)
2	Job reference number and client name
3	Scheduled date and assigned team member
4	Job status badge — Pending / Active / Completed / Cancelled
5	Job value — linked invoice amount
6	View Job button — opens detailed job management view
7	Create New Job button — manually creates a job (or auto-created from accepted quote)

Invoices

The invoices section provides a complete financial record for the business. Invoices are automatically generated from completed jobs and can be downloaded as PDF documents or sent to clients via email directly from this screen.

#	Description
1	Invoices list with search and filter controls
2	Invoice number linked to job and client
3	Invoice date and payment due date
4	Total amount and GST breakdown
5	Payment status — Unpaid / Paid / Overdue
6	Actions — View, Download PDF, Send to client
7	Revenue summary row — totals for filtered date range

Client Management

The client database stores all contact information for past and present clients. Each client record shows their complete history of quotes, jobs and invoices, making it easy to manage ongoing relationships and look up contact details.

#	Description
1	Client database with search bar and export option
2	Client full name and contact email
3	Phone number and property address
4	Number of quotes and jobs associated with this client
5	View Client button — opens client history and contact management
6	Add New Client button — manually create a client record

Calendar

The calendar view provides a visual schedule of all upcoming and active jobs. Colour-coded event blocks allow admin to quickly identify job status at a glance, while clicking on any day or event opens the full job details.

#	Description
1	Calendar header with month/week toggle and navigation arrows
2	Job event blocks — colour-coded by status (active = green, pending = amber)
3	Date cell — click to view all jobs scheduled for that day
4	Job tooltip on hover — client name, service type and time
5	Legend — colour key for job statuses displayed on the calendar

The materials database catalogues all products used in quotes. Wholesale costs and retail prices are stored, with a Bunnings search integration to look up current market pricing via a Supabase edge function.

Service Packages

+ New Package

No packages yet. Create your first service package.

#	Description
---	-------------

1	Service packages — pre-built bundles used to quickly populate quote line items
---	--

2	Package name, description and total price
---	---

3	Included line items within the package
---	--

4	Edit / Delete controls for each package
---	---

5	Create New Package button — define a new reusable service bundle
---	--

The agents page is where the admin reviews new agent registrations, approves or suspends accounts, assigns referral codes, and configures commission rates. This screen is the control centre for the entire referral partner program.

DashboardWorkFinanceResourcesAdminLogout

Agent Management

Agent	Agency	Contact	Requests	Referral Code	Commission	Status	Actions
Andy Perry	Test Agency	perry.andyjames@gmail.com 0459980238	0	17b9de8e	5%	approved	Suspend
Test Agent 2	Barry Plant Test	testagent2@example.com 0400 111 222	0	ab898333	Off	pending	Approve Suspend
Jane Smith	Barry Plant Doncaster	janesmith.agent@example.com 0413 999 888	3	d823b318	Off	pending	Approve Suspend

#	Description
1	Agent management list — all registered referral partners
2	Agent name, email and agency
3	Registration date and approval status (Pending / Approved / Suspended)
4	Commission enabled toggle — enable/disable commission earning for each agent
5	Commission rate field — set the percentage rate for this agent
6	Approve / Suspend / Remove action buttons
7	Referral code assigned to each agent — used in the public quote request form

Agent approval workflow: When a new agent registers, they appear here with a *Pending* status badge. The admin must click Approve before the agent can access their portal. Commission can be enabled or disabled per agent, and the commission percentage rate is set here.

Admin Settings

The settings page allows configuration of business details, email notification preferences, push notification management, and default quote/invoice parameters such as GST rate and payment terms.

CHAPTER 4

Business Tools

A unified communication hub with nine pre-built email templates for every stage of the client lifecycle — from initial quote follow-up through to review requests.

Email Composer

The Business Tools section provides admin with a professional email composer pre-loaded with nine scenario-specific templates. Selecting a template auto-populates the subject and body with the appropriate message, with placeholders for the client's name, job details and amounts automatically filled from the database.

Send Email

#	Description
1	Business Tools heading — unified communication hub for client-facing emails
2	Template selector — 9 pre-built email scenarios (Quote follow-up, Booking confirmation, Invoice, Review request, etc.)
3	Recipient field — type client name or email to auto-populate from the client database
4	Email body editor — template text with editable placeholders (client name, date, amount)
5	Preview panel — shows rendered email as the client will see it
6	Send button — dispatches via Supabase send-transactional-email edge function

Supabase Edge Function: All emails are sent via the **send-transactional-email** edge function hosted on Supabase. This ensures reliable delivery, consistent branding, and keeps email credentials secure on the server side rather than in the browser.

Nine pre-written email templates cover the key communication scenarios in the client lifecycle. Each template is designed to sound professional and personal, reinforcing the Mayura brand in every client interaction.

#	Description
1	Email template library — nine scenario-specific templates available
2	Template card — title, description and "Use This Template" button
3	Template preview text — shows the opening lines of the email template
4	All templates are pre-personalised with the client's name and job details automatically injected

- › **Quote Follow-Up** — politely chase a client who has not responded to their quote
- › **Booking Confirmation** — confirm a scheduled job date and time
- › **Job Completion** — notify the client their garden work is finished
- › **Invoice Sent** — inform the client an invoice has been issued
- › **Payment Reminder** — follow up on an outstanding invoice
- › **Review Request** — ask a satisfied client to leave a Google review
- › **Seasonal Offer** — send a promotional offer for seasonal services
- › **Welcome New Client** — onboard a new client after their first booking
- › **Custom Message** — free-form template for any other communication need

CHAPTER 5

Phone App (PWA)

The Mayura Garden Services website is built as a Progressive Web App — it can be installed to any smartphone home screen and used like a native app, with offline support and push notifications.

A **Progressive Web App (PWA)** is a website that behaves like a native mobile app. Mayura Garden Services is built as a PWA, meaning staff can install it to their phone's home screen and use it exactly like an app — without needing to download anything from the App Store or Google Play.

Installing on iPhone (iOS / Safari)

1. Open **Safari** and navigate to **www.mayuragardenservices.com.au**
2. Tap the **Share** button (the box with an arrow pointing up) in the Safari toolbar
3. Scroll down and tap **"Add to Home Screen"**
4. Edit the name if desired, then tap **"Add"**
5. The Mayura icon will appear on your home screen — tap to open the app

Installing on Android (Chrome)

1. Open **Chrome** and navigate to **www.mayuragardenservices.com.au**
2. Tap the **three-dot menu** (⋮) in the top-right corner
3. Tap **"Add to Home screen"** or **"Install app"**
4. Tap **"Install"** to confirm — the Mayura icon will appear on your home screen

App icon: When installed, the app uses the official Mayura Garden Services icon (the green leaf logo) at both 192×192 and 512×512 pixel resolutions, so it looks sharp on all screen sizes. The app opens in *standalone* mode — without the browser address bar — giving it a full native-app appearance.

#	Description
1	Mobile header — logo, navigation hamburger menu
2	Hero section — full-width on mobile with stacked CTA button
3	Services cards displayed in single-column layout on mobile
4	Site is a Progressive Web App (PWA) — can be installed to the home screen on iOS and Android

#	Description
1	Services section scrolled — stacked card layout optimised for touch
2	Before/After gallery — touch-drag slider works natively on mobile
3	Quote request form is fully accessible on mobile with native date picker support

The entire admin portal is fully responsive and optimised for mobile use. The layout adapts automatically from desktop to phone — KPI cards stack vertically, tables become scrollable, and a persistent bottom navigation bar replaces the desktop sidebar, providing thumb-friendly access to all key sections.

#	Description
1	Mobile admin header — condensed navigation with notification bell
2	KPI cards stack vertically in 2-column grid on mobile
3	Revenue and job count cards visible above the fold
4	Recent activity scrollable list — swipe-friendly on touch screens
5	Bottom navigation bar — fixed, touch-optimised tab bar with icons and labels (Dashboard, Quotes, Jobs, Invoices, Clients)

#	Description
1	Jobs page rendered on mobile — full functionality maintained on smaller screens
2	Job cards with swipe-accessible action buttons
3	Status badges and job values clearly visible in compact card layout
4	Bottom navigation remains persistent across all admin pages on mobile

The bottom navigation bar (5) is fixed to the bottom of the screen across all admin pages on mobile, providing one-tap access to Dashboard, Quotes, Jobs, Invoices and Clients.

Mobile Quote Editor & Push Notifications

CHAPTER 5 — PHONE APP
(PWA)

Quote Editor on Mobile

The full quote creation workflow is accessible on mobile. Admins can create, edit and send quotes while on-site at a client's property, using the phone camera to upload photos directly.

New Quote

Build a garden styling quote for your client

+ Delivery	
	Home
	Quotes
	Jobs
	Invoices
	Clients
#	Description
1	Quote editor on mobile — full quote creation capability on phone
2	Client details fields — touch-friendly input with native mobile keyboard
3	Line items table scrolls horizontally on narrow screens
4	PDF and Send buttons accessible at the bottom of the form

Push Notifications

The app supports Web Push Notifications, allowing the system to alert staff of new quote requests even when the browser is not open. When a visitor submits a quote request on the public website, the admin receives an instant push notification on their phone or desktop.

Technical implementation: Push notifications use the Web Push API with VAPID keys. The public VAPID key is served by the **get-vapid-public-key** Supabase edge function. Notifications are dispatched via the **send-push-notification** edge function. Subscriptions are managed in Settings → Push Notifications.

Offline Support

A service worker (`/public/sw.js`) caches key app assets so the app can load even in poor network conditions. Critical business data (quotes, jobs) will display the last-known data when offline, and sync automatically when connectivity is restored.

CHAPTER 6

SEO & Social Media Integration

Comprehensive search engine optimisation and social media sharing infrastructure — covering meta tags, Open Graph, structured data, sitemap and multi-platform sharing tools.

The website's HTML <head> contains a comprehensive set of meta tags optimised for both search engine indexing and social media sharing.

Search Engine Meta Tags

▶ Title tag: "Mayura Garden Services Professional Garden Services in Melbourne"
▶ Meta description: Concise summary of services for Google search result snippets
▶ Meta keywords: Targeted local service keywords for Melbourne/Templestowe
▶ Robots directive: index, follow — instructs search engines to index and follow links
▶ Canonical URL: https://www.mayuragardenservices.com.au/ — prevents duplicate content issues
▶ Author: Mayura Garden Services

Open Graph Tags (Social Media Previews)

Open Graph tags control how the website appears when shared on Facebook, LinkedIn and other platforms. A dedicated OG image (1200×640 px) ensures a professional visual preview whenever someone shares the link.

▶ og:type: website
▶ og:site_name: Mayura Garden Services
▶ og:title: Same as the page title
▶ og:description: Compelling description for social previews
▶ og:image: /og-image.jpg (1200×640 px JPEG — the dedicated social share image)
▶ og:locale: en_AU (Australian English)

Twitter Card Tags

▶ twitter:card: summary_large_image — shows a large image preview on Twitter/X
▶ twitter:title and twitter:image — match the OG tags for consistency

Updating the OG image: To change the image that appears when the site is shared on social media, replace the file at /public/og-image.jpg. The recommended size is 1200×630 pixels. After updating, clear any social media caches using Facebook's Sharing Debugger or LinkedIn's Post Inspector.

Geo-targeting, Structured Data & Sitemap

Geo-targeting Meta Tags

The site includes geographic meta tags to signal to search engines that Mayura serves a specific local area, improving rankings for location-based searches such as "gardener Lower Templestowe" or "Melbourne garden services".

- › **geo.region:** AU-VIC — targets Victoria, Australia
- › **geo.placename:** Lower Templestowe — the primary service suburb
- › **ICBM coordinates:** Latitude/longitude for the business location

JSON-LD Structured Data (LocalBusiness Schema)

Structured data in JSON-LD format tells Google exactly what type of business this is, enabling rich results such as the business knowledge panel, star ratings and contact details in search results.

- › **@type:** LocalBusiness
- › **name:** Mayura Garden Services
- › **telephone, email, address** — structured contact information
- › **areaServed:** Melbourne, Victoria, Australia
- › **ABN:** 22 046 912 532

XML Sitemap

The sitemap at `/sitemap.xml` lists all public pages of the website with their last-modified dates. This file is submitted to Google Search Console to help search engines discover and index new content quickly.

Robots.txt

The `/robots.txt` file instructs search engine crawlers which pages to index and which to ignore. Admin and agent portal pages are excluded from indexing to prevent sensitive URLs appearing in search results.

Google Site Verification

The site includes a Google site verification meta tag, confirming ownership in Google Search Console. This is required to access search performance data, submit sitemaps and receive Google notifications about the site.

Social Share Buttons & WeChat Modal

Social Share Buttons

Six social sharing buttons on the homepage allow visitors and staff to easily share the Mayura website across multiple platforms. Each button opens the relevant platform with a pre-constructed message and the site URL.

#	Description
1	Facebook share button — opens pre-filled Facebook post with site URL and OG image
2	Twitter/X share button
3	WhatsApp share button — sends message link directly to WhatsApp
4	LinkedIn share button
5	Email share button — opens default email client with pre-filled subject and body
6	WeChat button — opens QR code modal for adding contact or sharing page in WeChat

WeChat QR Code Modal

The WeChat integration recognises that a significant portion of Mayura's clientele may be from the Chinese-Australian community, for whom WeChat is the primary communication and social media platform. The WeChat modal provides two QR codes — one to add Mayura as a WeChat contact, and one to share the website link within WeChat.

#	Description
1	WeChat modal — opens from the social sharing button on the landing page
2	"Add Me" tab — QR code for adding Mayura's WeChat contact directly
3	"Share Page" tab — QR code for sharing the website URL via WeChat
4	QR code image — scan with WeChat camera; served from /public/wechat-qr.jpg
5	Close button — dismisses the modal; accessible via Escape key also

Updating the WeChat QR code: The QR code image is stored at `/public/wechat-qr.jpg`. To update it, replace this file with the new QR code image. The modal will automatically use the new image.

CHAPTER 7

Backend & Edge Functions

The technical infrastructure powering Mayura Garden Services — built on Supabase, with six serverless edge functions handling email, AI analysis, push notifications, and third-party integrations.

Supabase Architecture Overview

CHAPTER 7 — BACKEND & EDGE FUNCTIONS

The entire backend of Mayura Garden Services is built on **Supabase** — an open-source Firebase alternative that provides a PostgreSQL database, authentication, file storage, and serverless edge functions in a single managed platform.

Database Tables

- › **user_roles** — maps user accounts to roles (admin / agent)
- › **agent_profiles** — agent details, approval status and commission configuration
- › **agent_requests** — quote requests submitted by agents
- › **agent_referrals** — commission tracking records for each referral
- › **quotes** — all quote records with line items, client reference and status
- › **clients** — client contact database
- › **jobs** — job records linked to quotes and clients
- › **invoices** — invoice records with payment status
- › **quote_requests** — incoming public and agent quote request submissions
- › **quote_packages** — reusable service bundle definitions

File Storage

Garden photos uploaded via the public quote request form are stored in Supabase Storage in the **garden-photos** bucket. Files are served via a secure CDN URL and access is restricted to authenticated admin users.

Authentication

User authentication is handled by Supabase Auth using email/password. Role-based access control is implemented at the application level — the admin guard checks the `user_roles` table, while the agent guard checks the `agent_profiles` table for approval status.

Supabase Project ID: pirmqgpibssmghgebupb

Project URL: <https://pirmqgpibssmghgebupb.supabase.co>

Dashboard: <https://supabase.com/dashboard/project/pirmqgpibssmghgebupb>

Access the Supabase dashboard to manage database records, view logs, and configure edge functions. Credentials for the Supabase dashboard are separate from the website admin login.

Supabase Edge Functions

Reference

CHAPTER 7 — BACKEND & EDGE FUNCTIONS

Edge functions are serverless functions that run on Supabase's infrastructure. They handle all server-side operations — keeping API keys, email credentials and AI service tokens secure on the server, away from the browser.

send-transactional-email

Triggered by: Quote request submission, quote sending, invoice sending, booking confirmation, Business Tools email composer, job completion notifications.

Purpose: Sends professionally branded emails to clients and admin. Uses pre-built templates for each scenario. All email credentials (SMTP/API keys) are stored securely as Supabase secrets.

garden-value-analyzer

Triggered by: Public quote request form submission and agent quote request submission when garden photos are uploaded.

Purpose: Uses AI image analysis to assess the uploaded garden photos and generate a preliminary scope estimate (estimated size, visible issues, suggested services). The result is displayed in the Admin Quote Requests list, saving significant admin assessment time.

get-vapid-public-key

Triggered by: Browser push notification subscription setup (Settings → Push Notifications).

Purpose: Returns the VAPID public key required to register the browser for Web Push Notifications. The private VAPID key is kept secure on the server.

send-push-notification

Triggered by: New quote request submission (public or agent).

Purpose: Sends an instant Web Push Notification to subscribed admin devices, alerting them of a new quote request in real time — even when the admin portal is not open in the browser.

search-bunnings

Triggered by: Admin clicking the Bunnings search link in the Materials section.

Purpose: Queries the Bunnings product database to return current retail pricing for a named material. Helps admin set accurate wholesale-to-retail margins in the materials catalogue.

handle-email-unsubscribe

Triggered by: Client clicking the unsubscribe link in any transactional email.

Purpose: Processes the unsubscribe token from the email link and updates the client's record in the database to suppress future marketing emails. The /unsubscribe page provides a confirmation UI.

The following table summarises the complete technology stack used to build and run the Mayura Garden Services website and management platform.

Layer	Technology	Purpose
Frontend	React 18 + TypeScript	UI components and application logic
Build	Vite + SWC	Fast development server and production bundler
Routing	React Router v6	Client-side page routing
Data	TanStack React Query	Server state management and caching
Database	Supabase (PostgreSQL)	All business data, authentication, file storage
Edge Functions	Supabase Edge Functions (Deno)	Server-side logic, email, AI, notifications
Styling	Tailwind CSS + shadcn/ui	Design system and UI components
Fonts	Playfair Display + DM Sans	Brand typography
PDF	jsPDF	In-browser quote and invoice PDF generation
Charts	Recharts	Dashboard revenue and activity charts
Forms	React Hook Form + Zod	Form state management and validation
Notifications	Sonner + Web Push API	In-app toasts and browser push notifications
PWA	Web App Manifest + Service Worker	Home screen installation and offline support
i18n	Custom React Context	English/Chinese language switching
Hosting	Lovable.dev / CDN	Static site hosting and deployment pipeline

Support & Maintenance: For any technical changes to the website, edge functions, database schema, or Supabase configuration, please contact the web designer. The Supabase dashboard provides direct access to database records and logs for day-to-day business operations — no technical knowledge is required to use it for routine tasks such as viewing data or checking email send logs.
